

DAEWOO Glass Air Fryer

Industry' s Innovative Visual Air Fryer

This is an innovative visual air fryer in the industry. Different from the traditional drawer-type air fryer with an aluminum liner, this air fryer adopts the combination of a bracket-type body and a glass liner, allowing the user to observe the food changes in a 360-degree panoramic view.

The cooking process is clear at a glance, making it easier to control the cooking process. And it is not easy to burn, which ensures the food is fresh and tender, adding cooking fun to users.

High-speed Circulation of Hot Air Forges Excellent Taste

By using the high-speed circulation of hot air, the air fryer can quickly form a vortex-type circulating heat flow inside, so that the food is evenly heated, and the taste is crispy on the outside and tender on the inside.

And the operation mode is simplified to a radio button timer, which matches the cooking time reference of different ingredients screened on the body (0-45min can be set as needed, 200 degrees Celsius can be accurately controlled, no need to adjust the temperature).

the user only needs to turn the knob. When you start cooking, a greenhand can also be a master chef, easily cooking fancy delicacies.

Food-grade Thickened Borosilicate Glass Frying Basket

The material used in the inner tank is food-grade thickened high borosilicate glass, without Teflon coating, no harmful substances will be generated during use, healthy and no peculiar smell, the food is more secure.

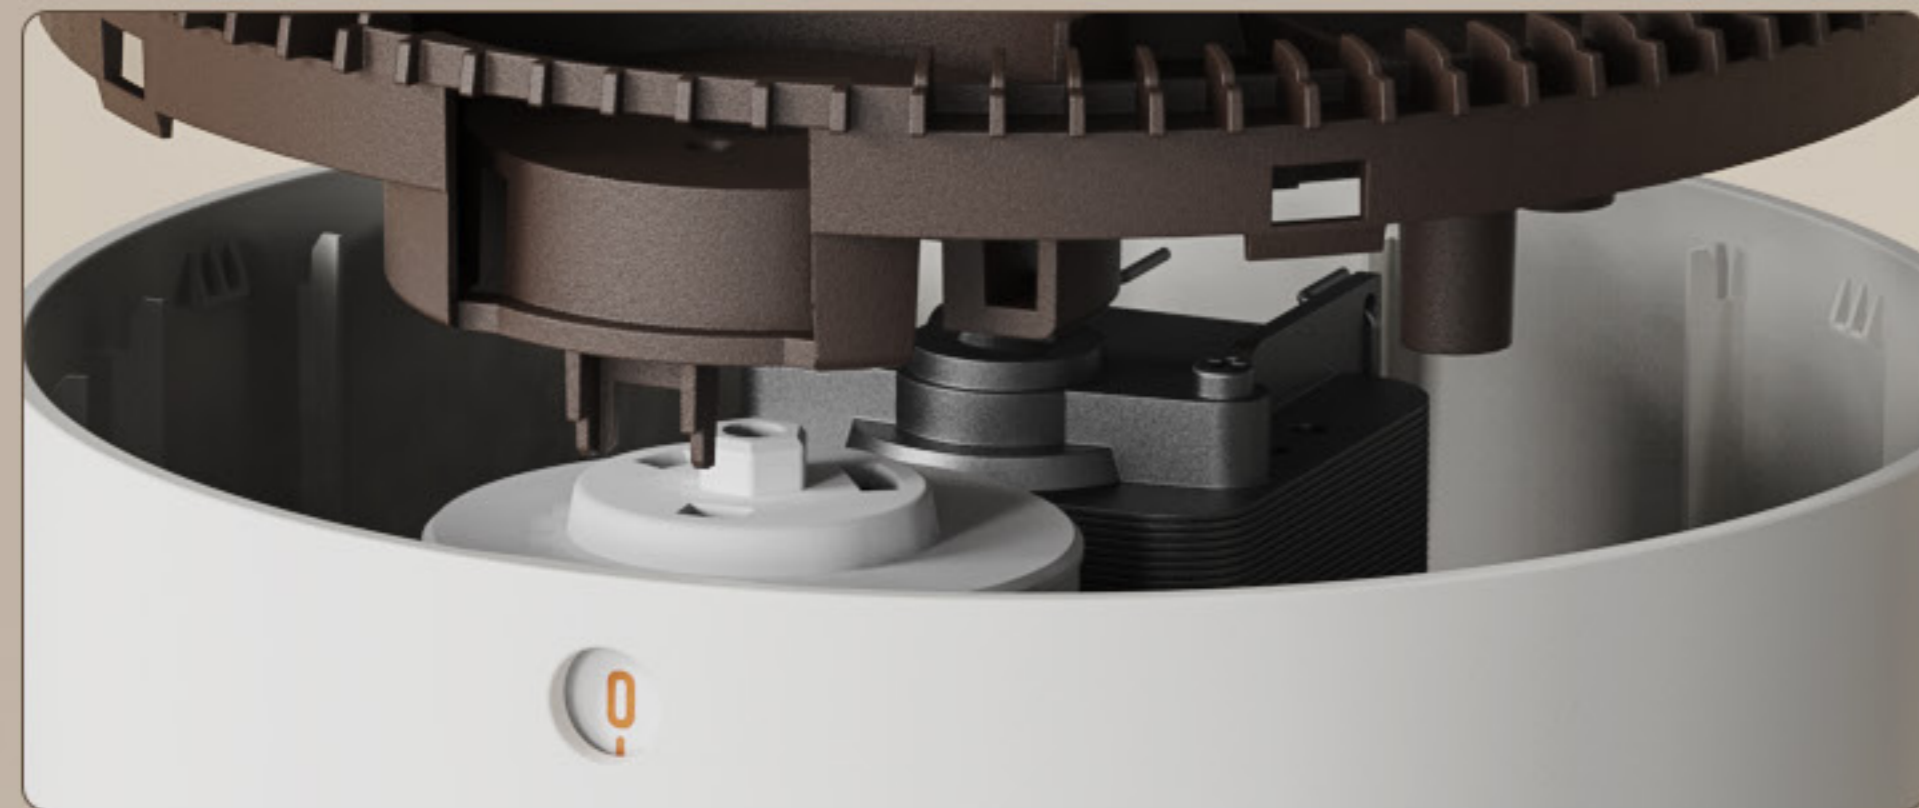

Food-grade Thickened Borosilicate Glass

Sensitive Micro Switch to Ensure Safe Use

The built-in sensitive micro switch enables the glass fryer to stop working the moment it leaves the working position, ensuring the safety during use. It will stop when the user wants to take out the frying basket to add ingredients.

Paying Attention to Details

The inner tank is made of glass, and the grill also has a non-stick coating, which is easy to clean while filtering out grease;

it has an anti-scalding handle, easy to carry; the back is equipped with cooling air vents, which can effectively prolong the service life of the air fryer; the bottom has non-slip silicone pads, which are stable and not easy to slip.

Minimalist Appearance Improves Home Vibe

Its appearance is inspired by the hourglass, which eliminates the large integrated shell of the traditional air fryer, and adopts the form of a tripod to support the entire heating component.

so that the glass liner in the lower half can show the changes of food to the user as much as possible, which is minimalist and elegant, meeting the design requirements of modern aesthetics and improving your home vibe.
